

Office of Congressman Rodney Davis (IL-13)

Potential Coronavirus Exposure Information

What Kind of Risk Do I Have?

After consulting with the U.S. House of Representatives Office of Attending Physician and due to following strict Centers for Disease Control and Prevention (CDC) guidelines on social distancing, facial coverings, and hand sanitation, we do not believe you were at risk of contracting COVID-19. The CDC advises that more than 15 minutes of close contact within 6 feet puts you at risk of contracting COVID-19. You do not fall within that criteria. However, out of an abundance of caution we are sharing this information and encourage you to consider getting tested. For more information on the nature of your specific exposure you may call our office at (309) 252-8834.

Want to Get Tested?

The Illinois Department of Public Health (IDPH) maintains a list of active testing locations. Find the testing location that works best for you by clicking here: <https://www.dph.illinois.gov/testing>. For your convenience a list of these locations in Champaign and Macon counties pulled from the IDPH website can be found on page 2 of this document. You can also contact your healthcare provider.
